Get Member List

Note:

Version Requirement:

This functionality is for Dremio v18.0+ Enterprise Edition only.

This API returns a list of members of this role. When a type is given, the API returns with a list of members for the required type.

Endpoint Syntax

Method and URL

```
GET /apiv3/role/{id}/members
```

Required Privileges

All users executing this Rest API must have the [MANAGE GRANTS privilege](#) assigned to receive a response output.

Parameters

- **startIndex** - The number-based index of the first query result. A value less than 1 is interpreted as 1.
- **count** - Non-negative integer. Specifies the desired maximum number of search results per page.
- **totalResults** - The total number of results matching the query. Non-negative integer required.
- **itemsPerPage** - The number of query results that are returned in the response.
- **startIndex** - The number-based index of the first result in the response.

Response Output

This is the standard response output for the API.

```
{ "data": {[
  {"id": "5ebcf4fa-ef8d-4bb4-8660-b18b18f661d7",
    "name": "a role",
    "description": "description",
    "Type": "role"},
  ...
]},
  "totalResults":100,
  "itemsPerPage":10,
  "startIndex":1
}
```

Response Codes

- **200** - Success.
- **403** - The user executing the API request lacks the **MANAGE GRANTS** permission.
- **404** - The role is not found.

Example

Example request

```
curl -X GET --location "http://localhost:9047/api/v3/role/5ebcf4fa-ef8d-4bb4-8660-b18b18f661d6/members" \  
  -H "Authorization: _dremiohrr395nv31g8k610616tucp91g" \  
  -H "Content-Type: application/json" \  
  -H "Accept: application/json"
```
