

## On this page

# Create a User

**Note:**

Version Requirement:

This functionality is for Dremio v18.0+ Enterprise Edition only.

This API creates a user with a name. Depending on whether the request has a password field or not, the user can be a local (with a password field) or external (without a password field).

## Endpoint Syntax

### Method and URL

**POST** /api/v3/user

## Required Privileges

All users executing this Rest API must have the [MANAGE GRANTS privilege](#) assigned to receive a response output.

## Response Input

### Response input

```
{"name": "username", "firstName": "dre", (optional) "lastName": "mio", (optional) "password": "password"}
```

## Response Output

This is the standard response output for the API.

### Response output

```
{ "@type": "EnterpriseUser", "id": "aaf2dc39-8c95-450b-a542-2e0192ea7150", "name": "username", "firstName": "dre", "lastName": "mio", "password": "password" }
```

- `200` - Success.
- `400` - Invalid request or duplicate user name.
- `403` - The user executing the API request lacks the `MANAGE GRANTS` permission.

## Example

### curl request example

```
curl -X POST --location "http://localhost:9047/api/v3/user" \ -H "Authorizati
```
